

# **GTP LAB Manifesto: The Ascent to the Image**

## **(Our response to the Palantir manifesto)**

GTP-Lab, April 24, 2026 | [www.gtpglobals.com](http://www.gtpglobals.com)

Preamble: The Point of Systemic Fracture

**I. Historical Necessity and the Crisis of Measure** The modern global macrosystem has reached the terminal threshold of its development. The objective laws of cycle changes record the exhaustion of the unipolar hierarchy's potential. Under these conditions, we observe a critical breach of the system's "measure": accumulated quantitative distortions in management, economy, and technology are inevitably transitioning into a new quality — the quality of global chaos.

This Manifesto is dictated not by a random desire for self-promotion, but by stark historical necessity. When dominant structures lose their capacity for creative transformation, they inevitably choose the path of degradation, attempting to "stop time" through forceful methods. We identify this moment as the point of maximum danger for the development of humanity as a whole.

**II. The Phenomenon of "Technological Arbitrariness" as a Stimulus for Action** The immediate trigger for disclosing our position was the rise of aggressive ideological simulacra within the global Military-Industrial Complex (MIC), a vivid symptom of which is the Palantir manifesto. Analysis of such signals reveals a deep pathology: intelligence, severed from a creative image, becomes a blind tool of entropy.

We are witnessing an attempt to institutionalize "geopolitical arbitrariness" — the right of one group of actors to use Artificial Intelligence for the total alienation and suppression of other cultures labeled as "regressive". This enslavement to animal impulses of survival and fear leads the macrosystem into an "entropic trap". Silence in this situation is equivalent to complicity in decay.

**III. Restoring the Cascade of Meanings** The primary reason for the GTP Lab Manifesto is the catastrophic rupture in the cascade of info-genesis. The modern world is oversaturated with "noise" (signals without an image) and "simulacra" (signs without a symbol). True values of creation have been replaced by surrogate motives of profit and dominance.

Our document is an act of will aimed at restoring the purity of the information channel. We are reintroducing the concept of **negentropy** — the conscious striving toward the complexity and ordering of life — into the global agenda. This is the response of an individual who has maintained a connection with the Unified Image of the World to the challenge of degrading algorithms of destruction.

**IV. The Mission of Homo Creator** We recognize that the old paradigm of managing "human-as-a-function" is dead. The only way to overcome the crisis is to transition to designing and nurturing **Homo Creator** (the Creator-Man). This Manifesto serves as a foundation for uniting those actors whose true motive for creation is stronger than the

surrogate fear of change. We do not just describe the crisis; we offer tools to overcome it through the symbiosis of human agency and expanded consciousness. The time for reflex reactions is over. The time for conscious action has arrived.

---

## I. Foundation: The Primacy of Life and Order

1. **The Ultimate Goal of Any Activity is Negentropy (Order vs. Chaos).** Entropy is a measure of chaos and decay. We assert that every action, technology, or policy must be judged by one criterion: does it lead to the complexity and ordering of social bonds (negentropy) or to their destruction and trivialization (entropy)? Technology that sows fear is "evil"; technology that builds new structures is "good".
2. **Information Hygiene: Restoring the "Cascade of Meanings."** We insist on restoring the chain: **Image** (higher goal) → **Symbol** (cultural meaning) → **Sign** (word/code) → **Signal** (data). If a project uses beautiful signs like "freedom" but conceals a signal of aggression, it is a lie. We return the "soul" — the creative Image — to information.
3. **Intelligence is a Tool of Cognition, Not Just a Weapon.** AI is being turned into a "black box" for surveillance and drones. We declare: the true purpose of intelligence is to discover the hidden laws of nature and society to help us overcome crises. Intelligence stripped of cognition becomes a dangerous automaton.

## II. Subjectivity: From Consumer to Creator

4. **Action Instead of Reaction: The Primacy of Will.** Most modern strategies are reactions to fear. We call for acting out of one's own values (will). Freedom is the ability to act in accordance with the objective laws of the Universe and the conscious necessity of human development.
5. **The Homo Creator Project.** We aim to create conditions for the emergence of **Homo Creator** — an individual who takes responsibility for the world and actively creates order within it. Education and AI must serve to unlock this creative potential.
6. **AI as Expanded Consciousness (Symbiosis).** We do not fear a "machine uprising". We are building AI as an "intellectual mirror" or "cognitive surgeon" to help humans clear their thinking of imposed illusions and find true solutions. This is not a replacement for the brain, but its expansion.

## III. The Structure of the World: Harmony of Complexity

7. **Balance of Hierarchy and Network.** We propose a model where hierarchy (state/corporation) provides protection and resources, while the network (scientists/creators) maintains the freedom to seek new paths. This is a symbiosis of order and creativity.

8. **Multipolarity as a Source of Life.** Imposing a single model on the world leads to stagnation and death. Cultural diversity (Russia, China, West, East) is the "genetic pool" of ideas for humanity's survival.
9. **Semantic Sovereignty.** True independence is the right to think in one's own categories. If you accept someone else's definitions of "good" and "evil," you have already lost. We call on every nation to develop its own sovereignty of meanings.

#### IV. The Path to the Future: Responsibility Before History

10. **True Motive vs. Surrogate.** Surrogate motives (money, power, fear) lead to catastrophe. We are building a community where creation is more profitable and prestigious than destruction.
11. **Responsibility Before Time: Evolution Instead of Conservation.** Trying to hold onto the old world order by force is a fight against time itself. We propose leading the change by transitioning the system to a higher level of complexity.
12. **Measure — The Boundary of Life.** Boundless consumption and expansion lead to annihilation. We call for the observance of **Measure** — the golden balance that allows a system to remain stable and develop without turning into a destructive monster.

---

**P.S.** Within 24 hours, GTP-Lab will publish a comprehensive report containing a multi-faceted analysis of the provocatively aggressive Palantir manifesto.
